

HRU, Hammar® H20 with shackle, USCG/EU

Item no.: 1003641

For extra safety, our liferaft containers can be fitted with a hydrostatic (water pressure) release unit, or HRU, enabling the liferaft to deploy and surface automatically when a vessel is sinking.

- Extra safety, liferaft is deployed automatically if the boat is sinking
- Safe, reliable and simple design with easy installation
- No servicing required (unit to be replaced every 24 months)

HRU, Hammar® H20

For extra safety, our liferaft containers can be fitted with a Hammar H20 hydrostatic (water pressure) release unit, or HRU, enabling the liferaft to deploy and surface automatically when a vessel is sinking.

The Hammar H20 is designed to be safe and reliable in all extreme conditions that you and your vessel might meet on the oceans. Should the vessel sink, the HRU is activated by increasing water pressure and will automatically release the liferaft.

The H20 is the best-selling hydrostatic release unit in the world and it has been saving lives on the oceans for more than 25 years, earning more worldwide approvals than any other unit.

The construction of glass fibre reinforced nylon prevents the Hammar H20 from corroding, which means that no annual service, maintenance or spare parts are needed. You simply install a new one every two years and dispose of the old one. With the environment in mind, the old unit is 97% recyclable.

**Mounting bracket and liferaft sold separately!*
